

# AirDrop

AirDrop is a system that allows users to share images, videos, and files with other in-range devices over Wifi and Bluetooth.

**Stay Safer on Apple Devices by following the instructions below:**

## Enable Privacy Settings

- Open settings, scroll down and tap on **General**.
- Scroll down and select **Airdrop**.
- Select from the three options **'Receiving Off'**, **'Contacts Only'** and **'Everyone for 10 Minutes'**.

While selecting **'Everyone for 10 Minutes'** is only a temporary setting that reverts to **'Contacts Only'** after 10 minutes, we do not recommend selecting this setting at all, as it will allow users who are not in your contacts to AirDrop files to you.
